POLICY BRIEF

PRINCIPLES OF EFFECTIVE PRACTICE FOR INTEGRATED STUDENT SUPPORT

BOSTON COLLEGE CENTER FOR THRIVING CHILDREN

Mat E. Walh, Ph.D., Jan Wae Gih, J.D., M.A., ClaieFlet, Ph.D., Maia The dakaki, M.A., Ki, en Rene, M.A.

Introduction

For over half a centur , it has been recogni ed that conte ts be ond school like health, social-emotional wellbeing, famil , and neighborhood can account for up to two-thirds of the variance in student achievement. Developmental s stems theories and neurobiological disciplines have more recentl begun to e plain 1 r-e01词风((l)-3 T disrupted. E posure to chronic adversit and trauma can lead to to ic stress, which can adversel impact children's brain development and diminish academic outcomes. In spite of these challenges, developmental science also recogni es the phenomenon of brain plasticit and the malleabilit of development, which makes it possible to intervene in the course of development. **P**

Principles of Effective Practice

Developmental science illuminates risks to child development and learning, as well as opportunities for meaningful intervention. e literature on development makes clear that: (1) protective factors can be bolstered while risk factors can be addressed, essentiall making it possible to tilt a child's negative developmental trajector in a positive direction; and (2) child development is in uenced across conte ts that include home, school, and communit .

So what does this impl for practice? Decades of scholarship from diverse elds emphasi e the importance of s stemic, comprehensive approaches to student support aimed at meeting the needs of the whole child, Across the nation, approaches to wraparound, comprehensive services, full service schools, communit schools, Promise Neighborhoods, or collective impact, are pursuing this aim. More recent scholarship asserts that because of the d namic in uences on child development and readiness to learn, e ective approaches to intervention must tailor to the heterogeneit of variations or di erences across children and across time. In short, the research suggests that to be an e ective intervention, student support should be: Customi ed, Comprehensive, Coordinated and Continuous.

Evidence of Efficacy: The Example of City Connects

Cit Connects was designed to operationali e the principles of e ective practice and see whether the would have an impact on students. Co-designed b researchers at the Boston College L nch School of Education and Boston Public School principals, teachers, families, and area communit agencies, Cit Connects presentl operates in over 85 urban public, charter, and parochial schools in nine cities across ve states. About 90% of students served b Cit Connects are low-income, 20% are learning English, and 19% receive special education services.
